Optimization by Vector Space Methods

Lectures Notes Prepared for MA719

Moody T. Chu

Department of Mathematics
North Carolina State University

October 8, 2002

Contents

1 Preliminaries **1**

Linear Space . . . 2
Vector Space . . . 3
More Definitions . . . 4
Convexity . . . 5
Normed Vector Space . . . 6
Convergence and Completeness . . . 7
Banach Space . . . 8
Hilbert Space . . . 9
Inner Product . . . 10
Orthogonal Complements . . . 11
Gram-Schmidt Orthogalization Process . . . 12
Best Approximation . . . 13
Projection Theorem . . . 14
Fourier Series . . . 15
Minimum Norm Problems . . . 16
Dual Problem of Best Approximation . . . 17
A Control Problem . . . 18
Minimum Distance to a Convex Set . . . 19
Basic Principles in Optimization . . . 20

2 Examples of Applications **21**

Nonlinear Programming . . . 22
Equality Constrained Problem . . . 23
Inequality Constrained Problems . . . 24
Linear Programming . . . 25
Discrete Model . . . 26
Dual Problem . . . 27
Convex Programming . . . 28
A Continous Case . . . 29
Calculus of Variations . . . 30
The Brachistochrone Problem . . . 31
Euler-Lagrange Equation . . . 32

Optimal Control . . . 33
Basic Formulation . . . 34
Hamilton-Jacobi Equations . . . 35

3 Duality in Banach Space **37**
Linear Functional . . . 38
Basic Dual Spaces . . . 39
Hahn-Banach Theorem, I . . . 41
Extension Form . . . 42
Applications . . . 44
Second Dual Space . . . 46
Orthogonality in Banach Space . . . 47
Minimum Norm Problems . . . 48
Extension of Projection Theorem . . . 49
Duality Principle . . . 50
Applications . . . 51
Characterizing Alignment in $(C[a,b])^*$ . . . 52
Chebyshev Approximation . . . 53
Characterizing Constrained Equalities . . . 54
Control Problem . . . 55
Rocket Problem . . . 56
Hahn-Banach Theorem, II . . . 58
Hyperplanes . . . 59
Separation of Convex Sets . . . 60
Minimum Distance Problems . . . 61
Adjoints . . . 62
Basic Properties . . . 63
Normal Equations . . . 64
An Example . . . 65
